About

Full Stack Developer building client-facing web and mobile applications across the MERN stack, improving 10+ projects through performance optimization, form validation, and error handling. Delivers REST APIs, database integration, responsive UI, and third-party API connections, with added attention to performance optimization, form validation, and error handling. Brings frontend and backend work together to ship reliable software that is easy to use and maintain.

Skills

Technical Skills: JavaScript, TypeScript, React, NodeJS, NestJS, ExpressJS, Bun, REST APIs, Jest, GraphQL, WebSockets, Docker, CI/CD pipelines, Authentication & authorization

Frontend Delivery: Responsive design, Cross-browser compatibility, Form validation, Web performance optimization, User interface development

Application Delivery: Third-party API integration, Error handling, Debugging, Testing

Work Experience

Backend Developer

Feb 2024 — Present

Devignlabs

Remote

- Develop backend endpoints that support application features and integrate cleanly with frontend requirements.
- Optimize backend response flow to improve performance during normal user activity.
- Maintain API documentation to keep backend interfaces clear for development work.
- Review incoming requirements and translate them into practical technical implementations.
- Collaborate with frontend teammates to align data flow and application behavior.
- Translate requirements into clear technical changes that align with product goals and user needs.

Full Stack Developer - MERN

Nov 2023 — Oct 2024

PH Virtual Tech

Remote

- Built custom web applications across frontend and backend workflows using React, Node.js, and REST APIs.
- Integrated third-party APIs into dynamic datasets while supporting backend service flow and data exchange.
- Improved responsive design, web performance optimization, and cross-browser behavior for smoother application use.
- Strengthened form validation and error handling to reduce user-facing issues across web application flows.
- Applied testing and debugging to stabilize releases and support reliable feature delivery.

Freelance MERN Web Developer

Apr 2022 — Nov 2023

Freelancing

Remote

- Built responsive MERN web solutions using React and Node.js, aligning front-end behavior with client requirements.
- Performed cross-browser and device QA to verify layout consistency and catch rendering issues before delivery.
- Improved mobile responsiveness through targeted interface refinements that supported smoother use on smaller screens.
- Coordinated directly with clients and vendors to clarify scope, align expectations, and keep projects moving.
- Applied debugging and testing practices to resolve issues and support stable delivery across freelance web builds.

Education

University of Mindanao, Philippines

2024

B.S. in Information Technology

Awards

Best Captone Presentation

2024

University of Mindanao

Projects

IWEFT

2024 — 2025

Web – Full Stack

Laundry delivery application developed for a Dubai-based service.

- Designed backend REST APIs, integrated frontend components, optimized database queries, and developed the admin dashboard and landing page.

IMOTOR

2024 — 2025

Web – Frontend Developer

Marketplace for buying and selling motorcycles, cars, trucks, and boats.

- Implemented client-provided Figma designs, built interactive frontend features, and collaborated with backend developers.

MATERNA CONNECT

2024 — 2024

Web – Full Stack

Web application for booking maternity checkup appointments.

- Developed frontend and backend components and implemented interactive features for a secure, reliable booking experience.

ADAP-HUB

2022 — 2022

Mobile/Web – Full Stack

Mobile application for persons with disabilities (PWD) in Davao City.

- Built profile registration and community features plus an analytics dashboard, with emphasis on accessibility and user- friendliness.
